***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance: claims 1-13 are considered allowable since when reading the claims in light of the specification, as per MPEP § 2111.01, In re Donaldson Co., Inc., 29 USPQ 2d 1845, 1850 (Fed. Cir. 1994), none of the references of record alone or in combination disclose or suggest the combination of limitations specified in independent claim 1, specifically "determining, at said head-end, whether said requested video program is associated with one of a predetermined plurality of subsets of video channels, wherein said plurality of subsets of video channels comprises a first subset of video channels representing a first subset of video broadcast channels having a first subscriber viewership level greater than a threshold level, a second subset of video channels representing a second subset of video broadcast channels having a second subscriber viewership level less than said threshold level; causing substantially continuous transmission of said first subset of video broadcast channels from said head-end to said plurality of subscriber stations; causing transmission of said second subset of video broadcast channels from said head-end to said plurality of subscriber stations based upon availability of channels in said second subset of channels and assigning video programming corresponding to said request to an available one of said second subset of channels" (page 7 line 20 – page 8 line 11).

The closest prior art of Irajima (US 6,211,901) teaches a video data distributing device that includes a service switch determining unit 2 that determines whether newly requested video data causes videos managed by a load state management unit 1 to exceed a predetermined threshold. When the videos managed by load state management unit 1 exceeds the threshold, the service switching determining unit 2 switches the type of service from full-video-on-demand (FVOD) to near-video-on-demand (NVOD) (Col 6 line 9 – Col 7 line 9).

The prior art of Rudrapatna (US 5,592,470) teaches a wireless broadband communication architecture structured to provide an array of narrowband and broadband services to an end user on demand. The bandwidth of delivery is dynamically adjusted to deliver and satisfy service requirements by utilizing the appropriate bandwidth on demand (Abstract).

Art Unit: 2426

However, inter alia, Imajima nor Rudrapatna taken singularly or in combination do not teach the invention of the applicant identified above and specifically do not teach determining, at said head-end, whether said requested video program is associated with one of a predetermined plurality of subsets of video channels, wherein said plurality of subsets of video channels comprises a first subset of video channels representing a first subset of video broadcast channels having a first subscriber viewership level greater than a threshold level, a second subset of video channels representing a second subset of video broadcast channels having a second subscriber viewership level less than said threshold level.

2. Any comments considered necessary by applicant must be submitted no later than payment of the issue fee and, and to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statements for Allowance."
